

## PROFESSIONAL SUMMARY

I'm a full-stack developer and infrastructure architect with a passion for building secure, scalable, and support-ready systems. My work spans backend APIs in .NET and Dapper, multi-client hosting platforms with Docker and NGINX, and cloud-native deployments using Azure App Services and Blob Storage. I specialize in modular architecture, CI/CD automation, and security hardening with Cloudflare, SSL, and container isolation. Every solution I deliver is designed for clarity, traceability, and long-term maintainability—whether it's onboarding documentation, reverse proxy routing, or audit-ready authentication flows.

## WORK HISTORY

### Adoteam

#### FOUNDER & INFRASTRUCTURE ARCHITECT

Architected a multi-client hosting platform from the ground up using Docker, NGINX, and Cloudflare. Designed modular APIs in .NET with

Dapper and SQL Server, deployed via Azure App Services, and secured with SSL, container isolation, and rate limiting.

- Built a reverse proxy system with domain-based routing and SSL termination
- Integrated CI/CD pipelines using GitHub Actions with manual recovery workflows
- Authored onboarding documentation, SECURITY.md, and deployment guides
- Hardened upload endpoints with MIME validation, auto-renaming, and volume isolation
- Implemented JWT authentication with refresh token rotation and audit logging
- Designed scalable folder structure for client onboarding and tech stack flexibility
- Deployed backend services to Azure with environment-based configuration

**Tech Stack:** C#, ASP.NET Core, Dapper, Docker, NGINX, Cloudflare, Azure, SQL Server, PHP, Apache, GitHub Actions

GitHub

### Cardia AB

#### FULL-STACK DEVELOPER & CLOUD INTEGRATOR

Developed a secure car auction platform using Laravel and Vue.js, integrating Swish-certified payments, Bisnode identity verification, and AWS cloud deployment. Engineered modular DTOs, service layers, and multi-tenant document workflows.

- Engineered Laravel backend with modular DTOs, secure API endpoints, and multi-tenant logic
- Built Vue.js frontend with dynamic car listings, filters, and document workflows
- Integrated Swish payment certification with key-based signing and payout logic
- Connected to Bisnode DirectAccess for identity and vehicle verification
- Deployed infrastructure on AWS with Mailgun integration and environment-based config
- Orchestrated local development with Docker, NGINX, and GitHub Actions CI/CD

**Tech Stack:** Laravel, PHP, Vue.js, Docker, NGINX, AWS, Mailgun, GitHub Actions, Bisnode, Swish, Redis, MySQL

### Freelance Projects

#### WEB DEVELOPER & SERVER INTEGRATOR

Delivered custom web solutions for MU Online servers, restaurant portfolios, and single-page applications using the MEAN stack. Engineered secure PHP/MSSQL integrations for real-time donations, rankings, and character resets, while implementing custom firewall rules to mitigate DDoS attacks.

- Built Angular-based single-page templates for portfolios, restaurant menus, and admin dashboards
- Integrated PHP frontends with MU Online MSSQL servers for donations, rankings, and character resets
- Automated donation workflows with instant crediting via card payments and account sync
- Implemented custom firewall rules and Cloudflare protection to defend against DDoS attacks
- Deployed projects on GoDaddy, HostGator, and AMMPS with manual server configuration

**Tech Stack:** Angular, JavaScript, TypeScript, Node.js, PHP, MSSQL, Cloudflare, GoDaddy, HostGator

2018 – 2023

## ARCHITECTURE & SECURITY

### Docker / NGINX

### Cloudflare / DDoS Mitigation

### CI/CD (GitHub Actions)

### SSL / Container Isolation

### Multi-Client Hosting

## EDUCATION

### Azure Cloud Utvecklare

#### JENSEN EDUCATION - KISTA

Completed a half-term specialization focused on Azure App Services, Blob Storage, CI/CD pipelines, and cloud-native architecture. Gained hands-on experience with scalable deployments, environment-based configuration, and secure cloud networking. Although not formally certified, the practical knowledge significantly shaped my current cloud deployment strategies.

2024

### Fullstack Utvecklare

#### CHASACADEMY - STOCKHOLM

Focused on JavaScript ecosystems including MEAN and MERN stacks. Built single-page applications using Angular and React, and developed RESTful APIs with Node.js and Express. Strengthened frontend/backend integration and modular design principles.

2020 – 2022

### Swedish as Foreign Language

#### STOCKHOLMS UNIVERSITY - STOCKHOLM

Completed formal training in Swedish language and grammar, enabling fluent communication in professional and legal contexts. Applied language skills to navigate municipal systems, documentation, and client interactions.

2017

## DEVELOPER SKILLS

C# / ASP.NET Core

Laravel / PHP

Vue.js / Angular

SQL Server / Dapper

JavaScript / TypeScript

MongoDB / MySQL
